

ABSTRACT

A photofinishing system comprising: a) a digital processor, a printer and means for feeding print media to the printer; the digital processor being arranged to receive digitised data that is representative of a photographic image and to process the data in a manner to generate a printer drive signal that is representative of the photographic image, and the printer being coupled to the digital processor and being arranged to process the drive signal and effect printing of the photographic image on the print media, and provided as an integrated portion of the photofinishing system,
5 b) means for effecting controlled chemical development and subsequent printing of exposed photographic film.
